

## GUTS DRAINING TUBE

### Description

Injector tube to rotate and wash the large intestine. It is an indispensable instrument in all tripe for its easy installation, use and ergonomics.

### Technical Data

- Made entirely of stainless steel
- With the injector tube, it is easy to turn and wash the casing without the risk of damaging it due to scratches or cuts, since pointed edges and any type of hook are avoided in its construction.
- Water irrigation mechanism by pedal valve.
- Approximate production: 50 casings / hour
- Process: The operator will manually cover the injector tube with the casing to be washed. He will then insert the gut through the hole in the tube and turn it over easily.
- It has a connection to a water intake for cleaning, an auxiliary tray to collect the turned casing
