

BLEEDING AND RECEPTION TABLE FOR LAMBS

Description:

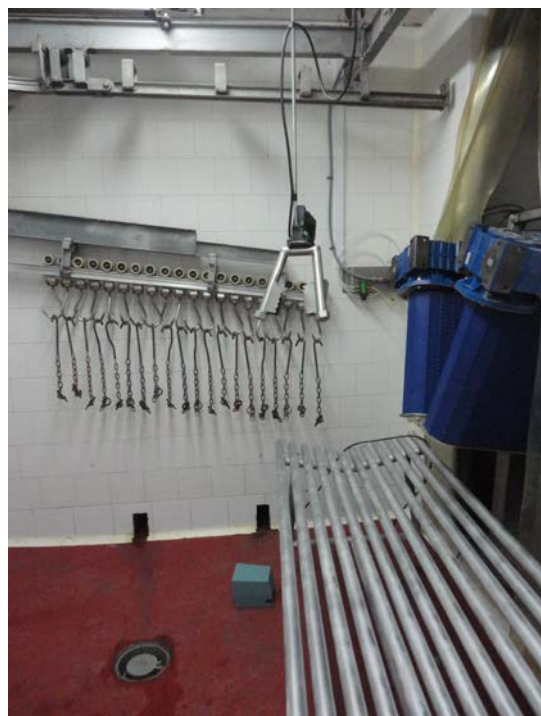

The reception table allows the lambs to be collected as they leave the restrainer for hanging and hoisting with an elevator to pass to the blood conveyor.

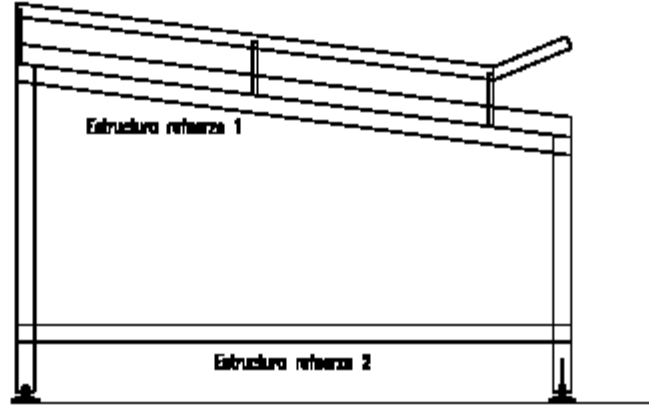

The table has a design that facilitates the dropping of the animal from the restrainer. In case that the slaughter takes place at the exit of the restrainer, the table allows the inferior collecting of the blood. Due to its design, the animal fall tends to fall far away from the restrainer, allowing a better and greater production.

Technical Data:

- Construction: Completely built in stainless steel.
- 40x40x2 tube frame stainless
- 60 diameter round receiving tubes
- Blood collection hopper plate e. 1.5
