

## ELECTRO – PNEUMATIC SHEEP DEHIDER

### Description:

The Mecanova electro-pneumatic dehider allows a complete skinning or dehiding of animals up to 80 kg from the kidney area to the head in a single operation thanks to its skin collection roller alongside with its pneumatic push system.

Its capacity is up to 200 animals per hour, although this will depend on the height at which the animals are hung and on the separation between them.

The handling of the machine allows regulating the winding speed, as well as improving the thrust. This improves both the performance and the quality of skinning.

### Technical Data:

- Chain in stainless steel sheet
- Solid one-piece stainless steel shaft, up to the winding pads
- Roller diameter: 125 mm. Length: 450 mm
- Push by pneumatic cylinder  $\phi$  100 Stroke (1000 - 1200)
- 1.5 KW winding motor
- Includes electro-pneumatic control and protection panel, pneumatic control unit for pressure, air drying and lubrication
