

HYDRAULIC SELF – ADJUSTABLE RESTRAINER

Description:

The self-adjusting hydraulic restrainer is a machine designed to drive sheep from pens to stunning points in an orderly and clean manner. This type of restrainer has as a particularity an automatic self-adjusting system, which allows adapting the driving space to the size and type of animal. This makes it an ergonomic machine, capable of handling both large and heavy sheep, as well as smaller lambs. Thanks to this self-adjusting system, the machine can be used to stunning pigs.

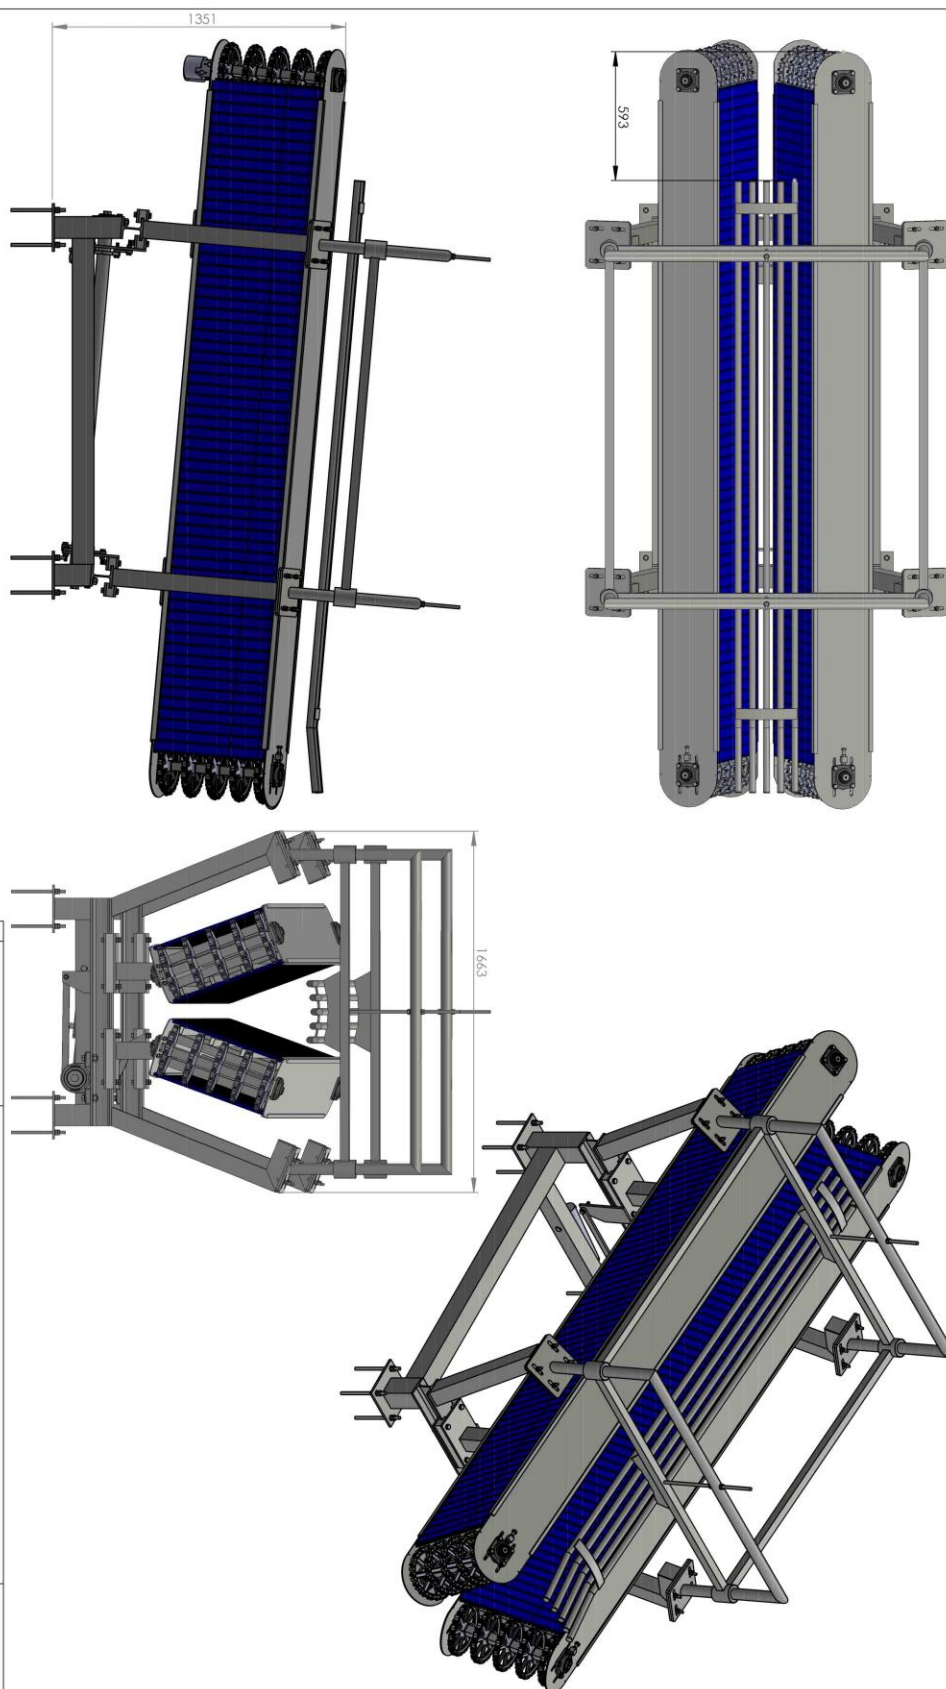

Its adjustment system by a hydraulic cylinders achieves a more precise coupling or separation. Hydraulic adjustment achieves better machine stability during stunning.

Technical Data:

- Made of AISI 304 Stainless Steel
- Hydraulic Motor 0'75 Kw
- Food modulating band in Acetal
- 3500 x 1700 x 2000 (available in other sizes)
- Hydraulic cylinders Φ 50 200 l
