

SHEEP SIDE PULLER

Description:

Mecanova's side puller allows to automatize a usually very manual and laborious work of skinning sheep.

The equipment consists of a stainless steel handle with a design that facilitates the penetration into the animal's flanks, separating skin from the carcass effortlessly for the operator. The equipment is pneumatically. It works both hands and is specially suitable for animals between 20 kg and 70 kg. It is not recommended for old and fat animals.

Its production capacity is 200 animals per hour. It is possible to reach 400 animals per hour if two side pullers are placed.

Technical Data:

- Made of AISI 304 Stainless Steel using machined blocks
- Driven by double-acting pneumatic cylinder Φ 80 stroke 1,200
- Operated by pedal valve
- 2 meters long
- Includes electromagnetic control panel with pneumatic control unit for flow regulation, drying and lubrication.
